For all new installations

Made of aluminum

- No corrosion
- No bending or distortion
- Weather resistant
- 20 year warranty

No need for hidden hangers or spikes and ferrules

It's like having a continuous hanger for the entire gutter length. Uses 1 1/2" - 1/4" hex head screws with rubber washer.

Fits K-style gutters and installs in a single step with the gutter

It's invisible from the ground. Provides rigidity to withstand ice and snow coming off the roof.

Technical Data

Tested by an independent, accredited laboratory (Intertek Testing Services, NA Ltd.)

Volume capacity: can drain 305" of water per hour.

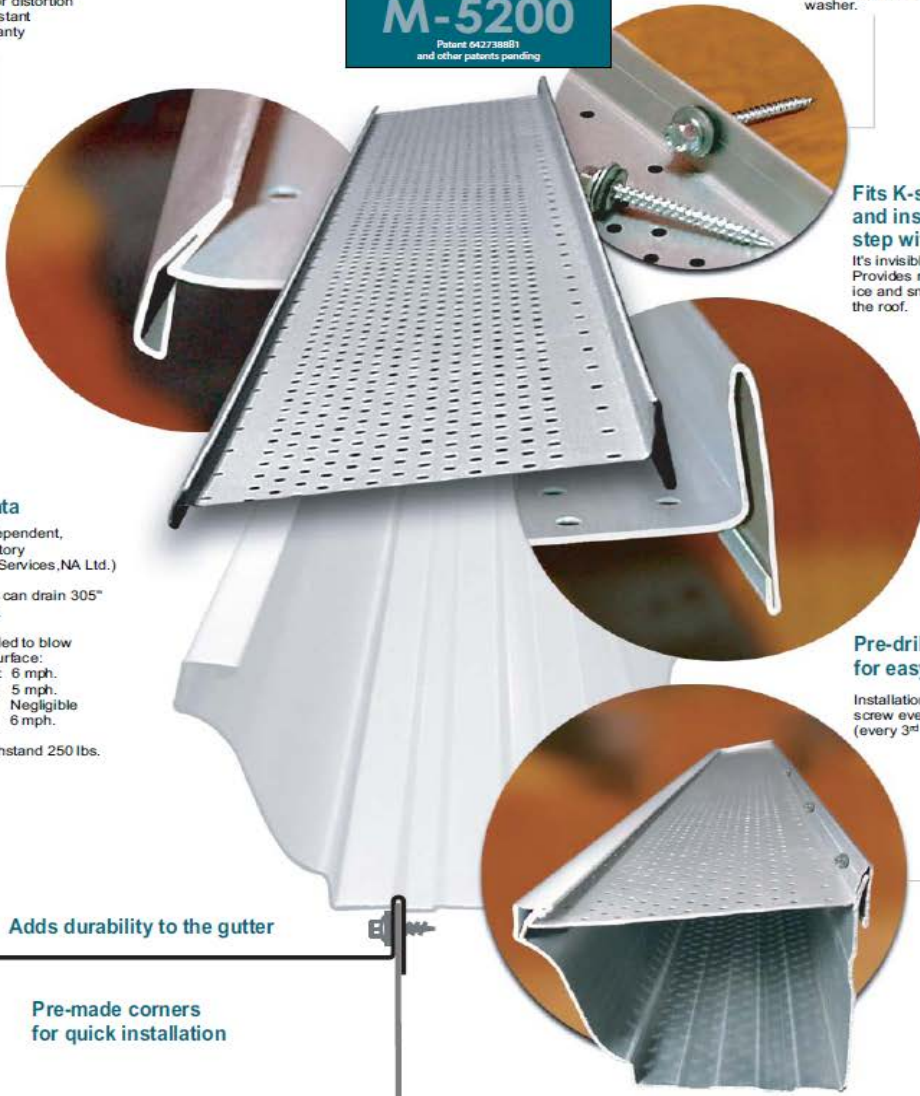

Wind speed needed to blow debris from the surface:

- Pine Needles : 6 mph.
- Fir Needles : 5 mph.
- Dry Leaves : Negligible
- Wet Leaves : 6 mph.

Pull test : can withstand 250 lbs. of pressure

Pre-drilled every 8" for easy fastening

Installation standard: screw every 24" (every 3rd hole)

Adds durability to the gutter

Pre-made corners for quick installation

GUTTER STYLES & PROFILES offered by NSHS

COLONIAL

The Colonial Gutter (also known as K Style) is the most common for residential applications in Vancouver and the Lower Mainland. It has a relatively wide bottom which allows for a large outlet to be installed and attached the downpipe. Debris is also not likely to be trapped as much as other gutter styles. This style has been available for over 40 years, and lends itself for gutter repairs due to its extensive use. The shape gives this gutter the strongest configuration and the 5" wide opening allows easier access for cleaning.

North Shore Home Services offers 4, 5, and 6 inch colonial gutter styles.

CROWN MOULD (FASCIA STYLE)

The Crown Mould style is also a popular choice in Vancouver and the Lower Mainland. This style is one of several Fascia Style gutters. New home builders may choose not to install a wood fascia (2x6 or larger). Instead a fascia style gutter is attached directly to the 2x4 sub fascia. Note the larger 5 inch depth allowing it to completely cover a 2x4 sub fascia.

Fascia style gutters give the appearance of a fascia board, and consequently they have been termed "Fascia".

LEAF GRABBER

THE DOWNPIPE STRAINER

For best results, remove the strainer section of the gutter outlet, located where the water drains out of the gutters. This will allow debris to flow freely into the downpipe and into Leaf Grabber!

Leaf Grabber will filter out damaging debris which will help avoid expensive drainage repairs!

Leaf Grabber (with its splash guard lid and attractive design), will fit most existing downpipes.

Enjoy watching the Leaf Grabber work!
